DELTA®-FASSADE SA

Self-Adhered Water-resistive Barrier & Air Barrier for Façade Systems with Open Joint Claddings.

MATERIAL

DELTA®-FASSADE SA is a 3-layer self-adhered water-resistive barrier (WRB) and air barrier with highly UV-stabilized acrylic coating. Its two outer layers are made of a high strength spun-bonded polypropylene (PP) fabric. They are thermally bonded to a highly vapor permeable, watertight polymeric middle layer. DELTA®-FASSADE SA maintains high vapor permeability and has a full surface coating of a high tack adhesive for bonding to common substrates. It has a split release liner for ease of application.

PROPERTIES

DELTA®-FASSADE SA, highly stabilized against damage from UV exposure, is designed for use in cladding systems that have open joints of up to 2" (50 mm) wide which expose up to 40 % of the entire facade surface. It acts as a durable drainage plane, channeling bulk (liquid) water from wind-driven rain and snow to the outside of the structure. The watertight membrane helps protect the building enclosure from damaging effects of moisture infiltration. Its high vapor permeability allows moisture within the cavity to escape swiftly. It is an air barrier that meets the industry's most stringent standards. DELTA®-FASSADE SA is light-weight and tear-resistant. This membrane withstands the rigors of jobsites, as well as tough wind and weather.

APPLICATION

DELTA®-FASSADE SA is installed outboard of the sheathing prior to the application of the final cladding system. DELTA® Accessories complete a UV resistant air barrier and WRB system. DELTA®-FASSADE SA is suitable for:

- Buildings under IRC
- Type V-B construction under IBC
- Buildings under 40' with no plastic foam insulation under IBC

DELTA® products support sustainable and energy-efficient building practices, including efforts toward achieving LEED® certification (LEED® for New Construction & Major Renovations, LEED® for Core and Shell, LEED® for Existing Buildings and LEED® for Homes).
